Presenter: Katie Johnson, Ph.D.

Faculty Development Consultant, Trial Build, LLC

Chair & Associate Professor of Biology, Beloit College

Student populations are becoming more diverse, and it is critical for educators and institutions to implement practices that ensure the success of all students. Practical approaches, including small changes in the classroom and laboratory, can have a huge impact on student experience, success, and retention in the sciences. Diversification of successful scientists is essential for optimal scientific progress and innovation, as well as addressing important issues of equity and social justice.
